                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 62
Plant Mol. Biol. 30:229-2413[1996].
-!- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-
linked D-glucose residues with release of D-glucose.
-!- TISSUE SPECIFICITY: Hydrolysis of terminal, non-reducing 1,4-
-!- TISSUE SPECIFICITY: Hydrolysis of terminal.
AFTER GERMINATION, WHILE LOW IEVELS ARE FOUND IN DEVELOPING SEEDS.
-!- DEVELOPMENTAL STAGE: LEVELS INCREASE STEADILY THROUGHOUT IMBIBITION REACHING MAXIMUM LEVELS AT DAY 7. DURING GERMINATION, LEVELS INCREASE FROM DAY 2, REACH MAXIMUM LEVELS AT DAY 3 AND DECLINE AFTER DAY 5.
-!- INDUCTION: BY GIBBERELLIN A3 (GA).
-!- SIMILARITY: BELONGS TO FAMILY 31 OF GLYCOSYL HYDROLASSES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     119 LSSLYRTLLSSPTTWRRKILLSHPNSDLTFSLINTTPFGFTISRKSTHDVLFDATPDPTN

Nucleotide sequence and expression of alpha-glucosidase-encoding
gene (agdA) from Aspergillus oryzae.";
Blockici. Biotechnol. Biochem. 59:1516-1521(1995).
Blockici. Biotechnol. Biochem. 59:1516-1521(1995).
CHUCTION: Hydrolyses malto-oligosaccharides, but has a low
activity toward soluble starch.
CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-
linked D-glucose residues with release of D-glucose.
Induction: By maltose.
SIMILARITY: BELONGS TO FAMILY 31 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (POTENTIAL)

Complete amino acid sequence of crystalline alpha-glucosidase from Aspergillus niger.,
-:- FUNCTION: Hydrolyzes malto-oligosaccharides, but has a low activity toward soluble starch.
-:- FUNCTION: Hydrolyzes malto-oligosaccharides, but has a low activity toward soluble starch.
-:- GTALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-linked D-glucose residues with release of D-glucose.
-:- SIMILARITY: BELONGS TO FAMILY 31 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29.4%; Score 1401.5; DB 1; Length 985; larity 33.4%; Pred. Biol. Chem. 257:4522-4528(1982).

-!- FUNCTION: PLAYS AN IMPORTANT ROLE IN THE FINAL STAGE OF
CARBOHYDRATE DIGESTION.

-!- CATALYTIC ACTIVITY: Hydrolysis of sucrose and maltose by an
alpha-D-glucosidase-type action.

-!- CATALYTIC ACTIVITY: Hydrolysis of 1,6-alpha-D-glucosidic linkages
in some oligosaccharides produced from starch and glycogen by
alpha-amylase, and in isomaltose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                       ASSOCIATED WITH ONE ANOTHER IN A COMPLEX BY NON-COVALENT LINKAGES. SUBCELLULAR LOCATION: Type II membrane protein. Brush border. PTM: THE PRECURSOR IS PROTEOLYTICALLY CLEAVED WHEN EXPOSED TO PANCREATIC PROTEASES IN THE INTESTINAL LUMEN.

PTM: SULFATED (BY SIMILARITY).

MISCELLANGOUS: THERE IS A HIGH DEGREE OF HOMOLGY BETWEEN THE ISOMALTASE AND SUCRASE PORTIONS (41 % OF AMINO ACID IDENTITY)

INDICATING THAT THIS PROTEIN IS EVOLVED BY PARTIAL GENE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
